- BE NOTIFIED ABOUT YOUR PRECIPITATION DATA Place your Rain Gauge on your lawn or garden to receive real-time alerts when it starts raining.
- EASY INSTALLATION The Rain Gauge can be placed up to 100 m (330 ft.) away from your Netatmo Personal Weather Station, ideally 1.2 m (4 ft.) away from any surface.
- GOOD TO KNOW Connect up to 1 Rain Gauge to your Netatmo Personal Weather Station and gain the ability to track information about the rain through your Weather Station (Sold Separately)

ULTRA PRECISE MEASUREMENTS The Rain Gauge provides real-time readings of the amount of rainfall in millimetres per hour and records total precipitation over time. Easily access your rain data history and graphs to understand weather trends and know what happened when you were not watching. Analyse your data history to water your plants precisely when they need it.

Place the Rain Gauge in your garden or on your balcony - it communicates directly with your Weather Station. The Netatmo Rain Gauge tells you precisely how much precipitation has fallen at your home, in millimetres per hour. It also displays the total precipitation over time and expected precipitation.

Box Contains: Rain Gauge, 2 x AAA batteries
